General Guidelines for Presentation

- Slides should not be too heavy with content. Better to create point wise.
- If you require more than one slide for any point, right click on that point slide then select duplicate slide and modify the duplicated slide.
- Diagrams must be aligned at centre and clearly visible with caption.
- All the mentioned fonts, font size, title content, etc should not change and strictly as per the given format and guidelines.

1. Introduction

Problem Identified:

- Students face difficulty finding suitable team members for hackathons
- No proper platform for skill-based matching and collaboration

Solution Proposed:

- Developed CodeClub app for smart team formation
- Provides profiles, matching, chat, and hackathon registration in one platform

2. Objectives

Objectives

- To build a centralized hackathon collaboration platform where students can manage all activities in one place
- To enable skill-based teammate discovery so students can find suitable partners based on skills and roles
- To provide effective team communication through real-time chat and group interaction
- To help students in connecting with like-minded people and improving networking

3. Scope

Scope

1. Can be applied in colleges and educational institutes for hackathon activities
2. Can be useful to students for finding team members easily
3. Can be extended to other colleges or universities
4. Can be used for technical events and competitions
5. Can be useful for improving collaboration and networking among students
6. Can be expanded with AI-based team recommendations in future

4. Feature /Functionality

Team Matching

- Users can find team members based on skills and roles
- Filters help in selecting the most compatible teammates

Real-time Chat

- Enables private and group communication
- Supports instant messaging and team discussions

Hackathon Module

- Browse and register for hackathons
- Track application status (pending/approved/rejected)

Admin Panel

- Admin can manage hackathons (create, edit, delete)
- Monitor users, teams, and system analytics

5. Outcome of Project

https://codeclub-b8e50.web.app/#/home

6. Technology Stack

Frontend

- Flutter framework for building mobile UI (Android/iOS)
- Material Design for modern and user-friendly interface

Backend

- Firebase Authentication for user login & security
- Python Server
- Firebase FireStoref
